PENGERTIAN METODE DALAM PERANCANGAN KOTA

- The 'design' in urban design is not (only) an 'art' -type process, it is also one of **research** and **decision-making**. Design is a **creative, exploratory** and **problem-solving activity.**
- Carmona, 2003

UD:
- ❑ Deals with physical quality of environment
- ❑ making better places

Method : a way of doing anything, especially according to regular plan

UD Method : a structure and form of the UD management process

Table (5) Urban Design Process according to various writers and theorists

	1	2	3	4	5	6	7
RIBA practice (Palazzo and Steiner 2011)	Data collection	Problem Analysis		Develop Options			Present Options
Hamid Shirvani (synoptic) (Shirvani 1985)	Data collection	Data Analysis	Goals and Objectives	Concept Generation	Elaborate Concepts to solutions	Evaluate	Transfer to Plans
Hamid Shirvani (Incremental) (Shirvani 1985)	Decisions and Objectives	Data Analysis	Goals & objectives	Concept Generation	Elaborate Concepts to solutions	Evaluate	Transfer to Plans
Hamid Shirvani Fragmental (Shirvani 1985)	Data Collection	Data Analysis	Goals & objectives	Concept Generation	----------Translate to plans----------		
John M. Levy (Levy 2009)	Data Collection & analysis		Synthesis (Problem analysis and develop options)			Evaluate	Details to Implement
Matthew Carmona (M. Carmona, S. Tiesdell, et al. 2010)	Setting Goals	Analysis	Visioning	Synthesis (testing)	Decision making (refining final solutions)	Evaluation	
Barry Young (Urban Design group 2011)			Define Physical design principals	Performance criteria	Design options		
Clara Greed & Martin Roberts (Greed & Roberts 2014)		Data Analysis	Vision, goals and objectives	Strategies			Guidelines Briefs
Tony Lloyd Jones (Palazzo and Steiner 2011)	Problem Definition	Rationale development (Analysis)	Potentials & constrains	Conceptualization & Evaluation			
Resulting process (Author's Conclusion)	**1. Data Collection**	**2. Data analysis**	**3. Setting Vision, goals & objectives**	**4. Concept generation and strategies**	**5. Develop options (from concepts to solutions)**	**Evaluation**	**7. Transfer to plans/ implementation**

Author based on (Palazzo and Steiner 2011, Shirvani 1985, Levy 2009, Urban Design group 2011, Greed and Roberts 2014, M. Carmona, et al. 2010)

URBAN DESIGN METHODS

According to Hudson :

there are five major schools of thought within normative planning theory.

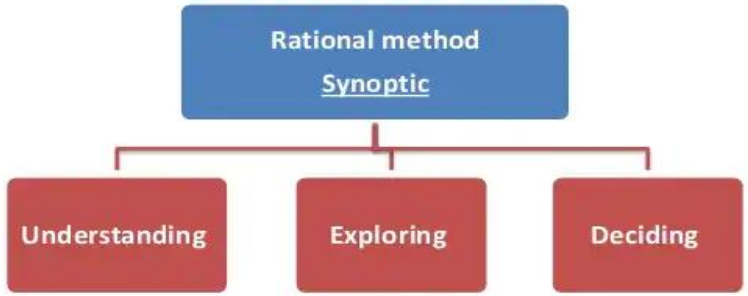

The five categories are:

1. incremental,
2. transactive,
3. radical traditions
4. advocacy-orientated,
5. and the synoptic.

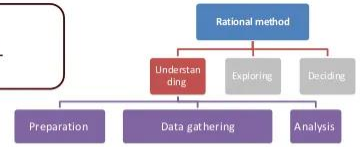

Synoptic planning:

has its roots in rationalism and utilitarian philosophy.
It proceeds as following:

Understanding

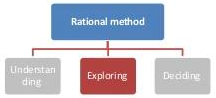

Understanding :
Figuring out What's Going on, it consists of :

1. Preparation .
2. Data gathering.
3. Analysis of existing conditions.

Exploring

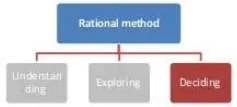

Exploring is the part of the process devoted to trying out ideas, investigating options, and exploring alternatives

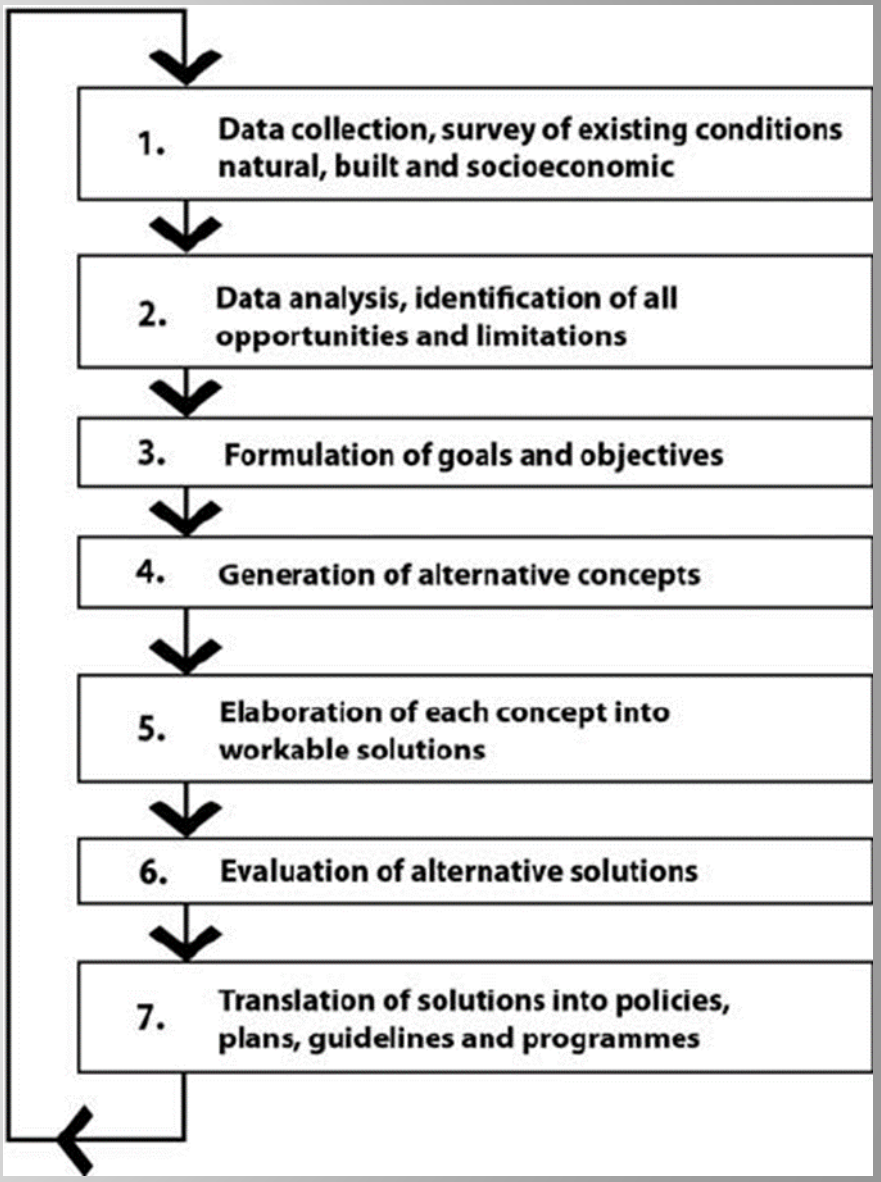

Deciding

Phase Three consist of the following steps:

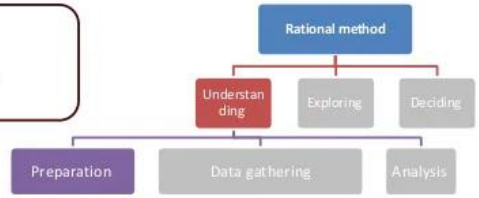

– Selecting the preferred alternative.
– Preparing presentation materials and final design documents.

PENDEKATAN SINOPTIK

Synoptic: rational, systematic design steps

Understanding

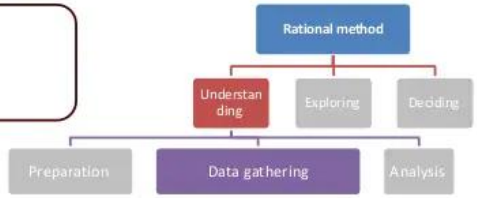

1. Preparation.

• The urban design team need to prepare:

– Maps for the area.
– All materials gathered and supplied by the client.

Understanding

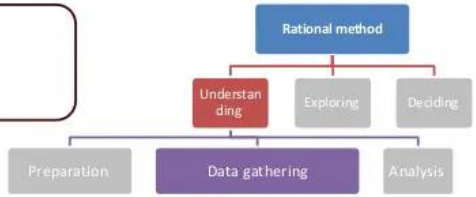

2. Data gathering.

• The existing hard data includes:

– Base maps (land use, building entrances, streets, topography, zoning, landscape, and so on).
– Historic surveys and written histories.
– The site within its regional context.
– Traffic studies.
– Others as relevant to the project.

Understanding

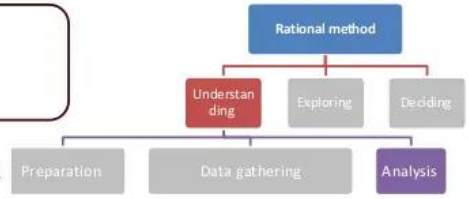

2. Data gathering.

Among things to measure are:
– Street widths.
– Intersections.
– Tree lawn widths.
– Sidewalk widths.
– Building widths.
– Space between buildings.

Understanding

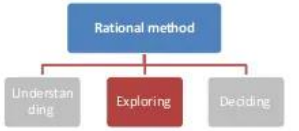

3. Analysis of existing conditions.

Prepare accurate base maps showing:
• The site within its impact area.

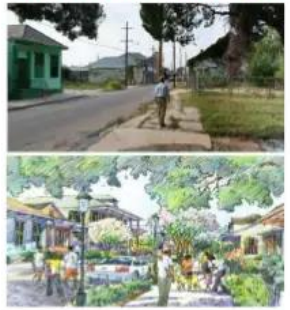

– blocks pattern.
– Street grid.
– Topography / natural features.
– Open space distribution.
– Land use portrait.
– Buildings (figure-ground).

Exploring

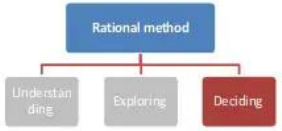

1. The intense brainstorming process that leads to a finished design.

• it is intended to accomplish the following:
– Review the base map and portrait drawings.
– Review and revise the street and site sections.
– Review the focus group summaries.
– Review the photos and slides.
– Develop a preliminary series of urban design principles.
– Develop a preliminary design alternatives.

Deciding

Phase Three is the part of the process where we use everything we have learned from our client, community representatives, and the consulting team to incorporate into a preferred alternative.

PROSES UD

- **Process : t**his is a logical process, through spatial and formal means, that entails the following main stages:
  - Problem identification
  - Goal and Objective-setting
  - Situational analysis
  - Synthesis
  - Evaluation
  - Implementation

Problem identification
What is not right? What liabilities ? Whose problem?
Who is affected?
Why is it a problem?
When is it a problem?
Where?
What does it call for?

Situational analysis:
Through inventories and other data collection techniques.
Considerations:
land use, population, transportation, natural systems, and topography; the varied character of areas, structure of neighbourhoods, business areas etc.

CONTOH PENYUSUNAN INTI MASALAH DESAIN

Masalah Kota	Penyebab	Inti masalah	Konsep Desain
Macet	Jumlah mobil>lebar/Panjang jalan, V/C~1		
	Manajemen lalin		
	Perilaku masyarakat		
	Side friction	Side friction	Konsep penataan tepi jalan yang memimalisir side friction
Safety	Kriminalitas tinggi karena jumlah polisi kurang		
	Krimininalitas tinggi karena ekonomi collaps		
	Kriminalitas muncul karena desain salah, tidak tahan vandalism, tidak berbasis CPTED dst.	Indefensible space	Konsep safety city berbasis CPTED
Pandemi	Perilaku abai masyarakat		
	RS kurang		
	Ruang aktivitas yang tidak menerapkan protocol kesehatan	Ruang public yang tidak tanggap pandemi	Desain ruang public berbasis health protocol (tactical urbanism dst)

CONTOH PROSES PERANCANGAN KOTA (BGN RUANG KOTA)

Kota Baru Yogyakarta

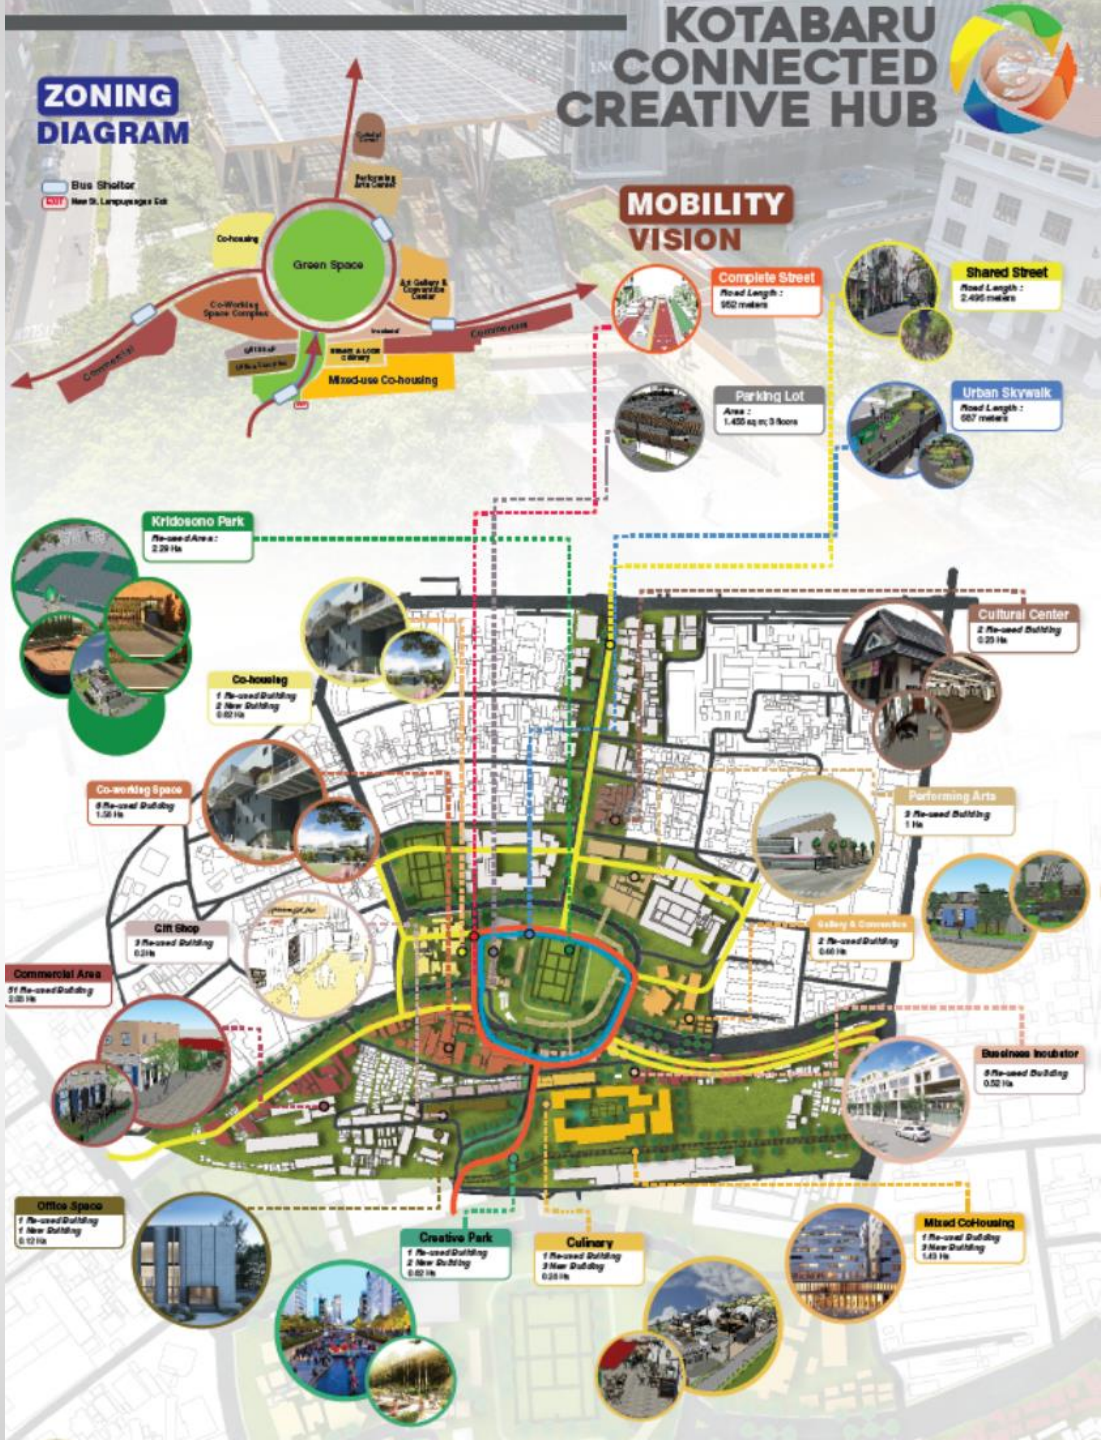

Note, Cara menentukan delineasi:

- Batas administrative
- Batas fisik alam, buatan
- Toponimi
- Zona inti (utama), zona lainnya, dst

Desain 1 : focus pada masalah letak strategis Kotabaru yang dekat dengan simpul transportasi. Desain berbasis TOD.

Desain 2 : Fokus ke masalah heritage area dan tourism. Desain berbasis pada Cultural Heritage Tourism

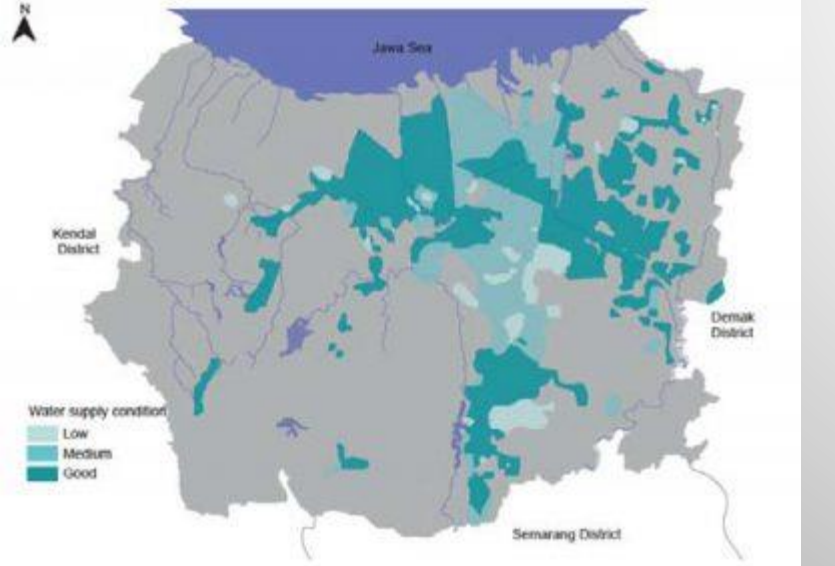

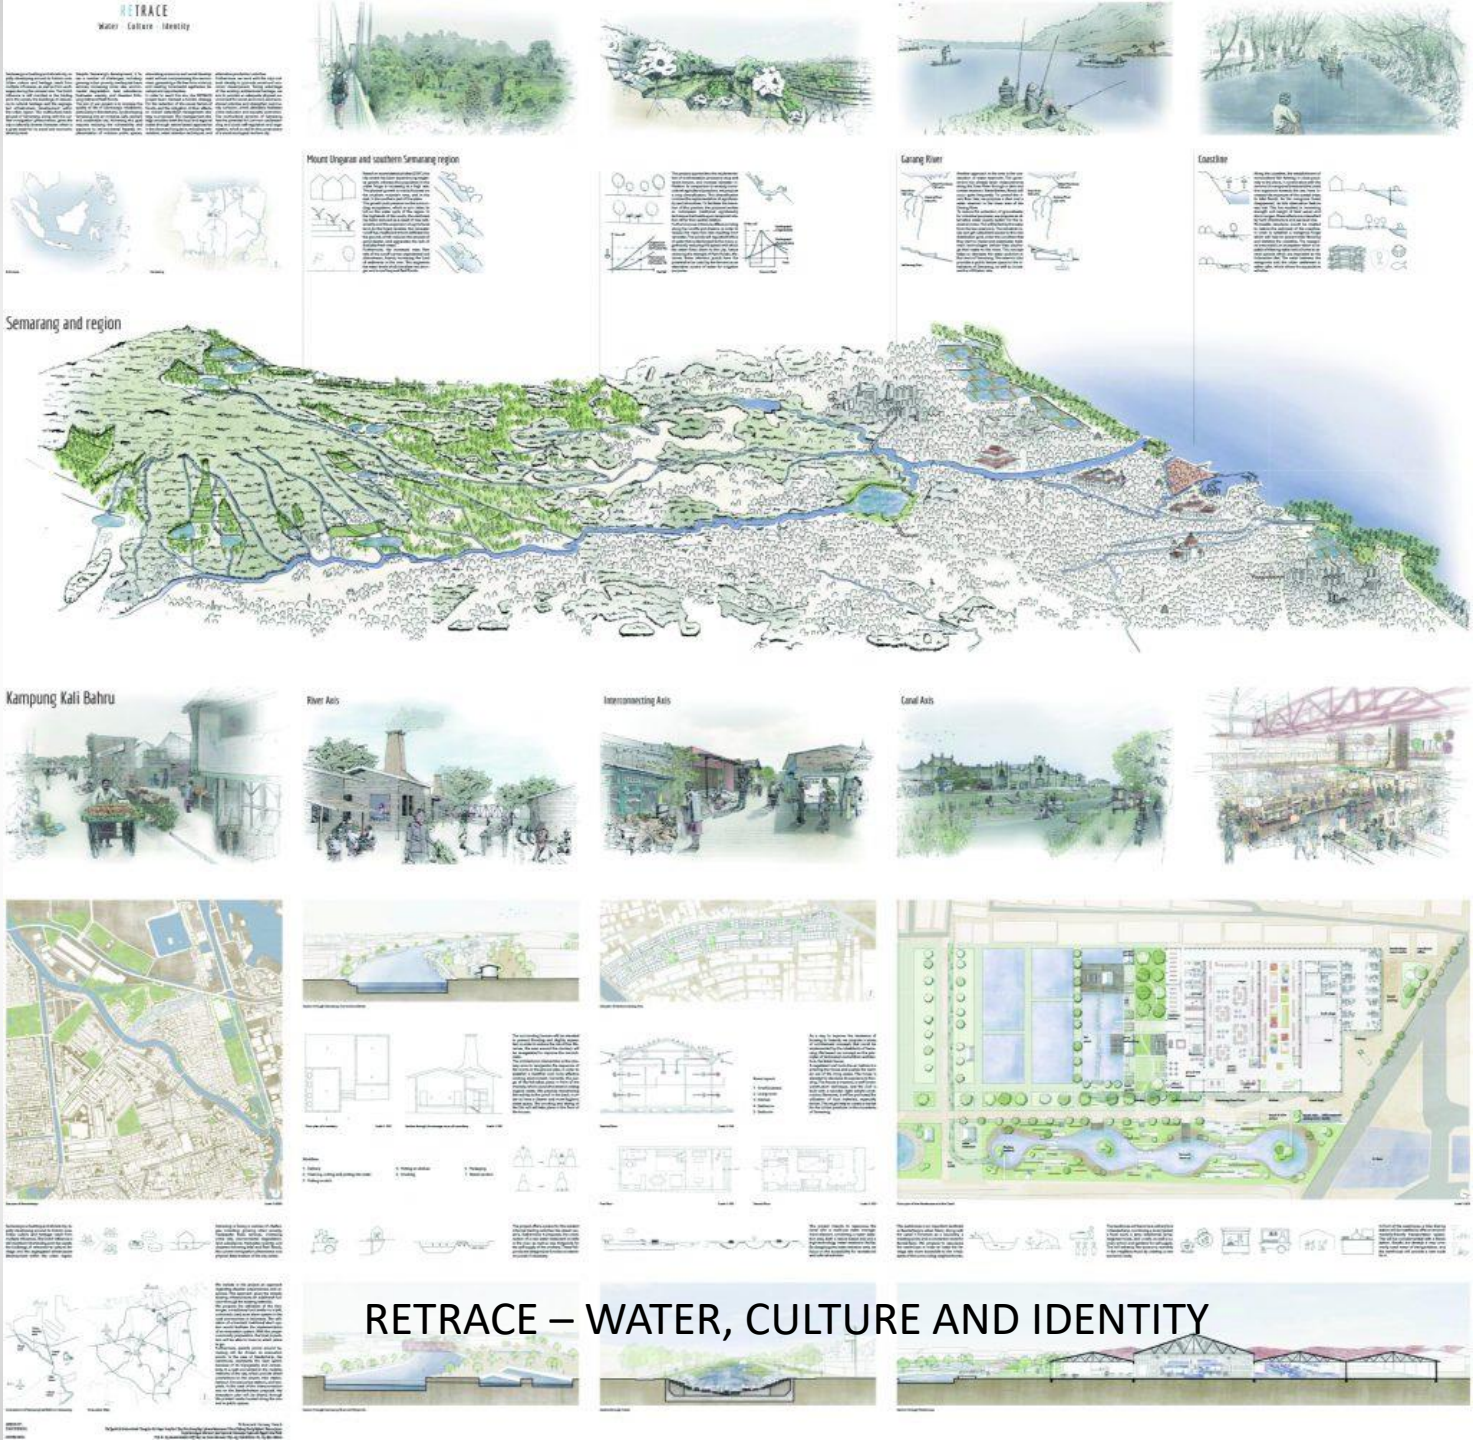

‘CITIES SINKING IN DROUGHT’, WATER SCARCITY

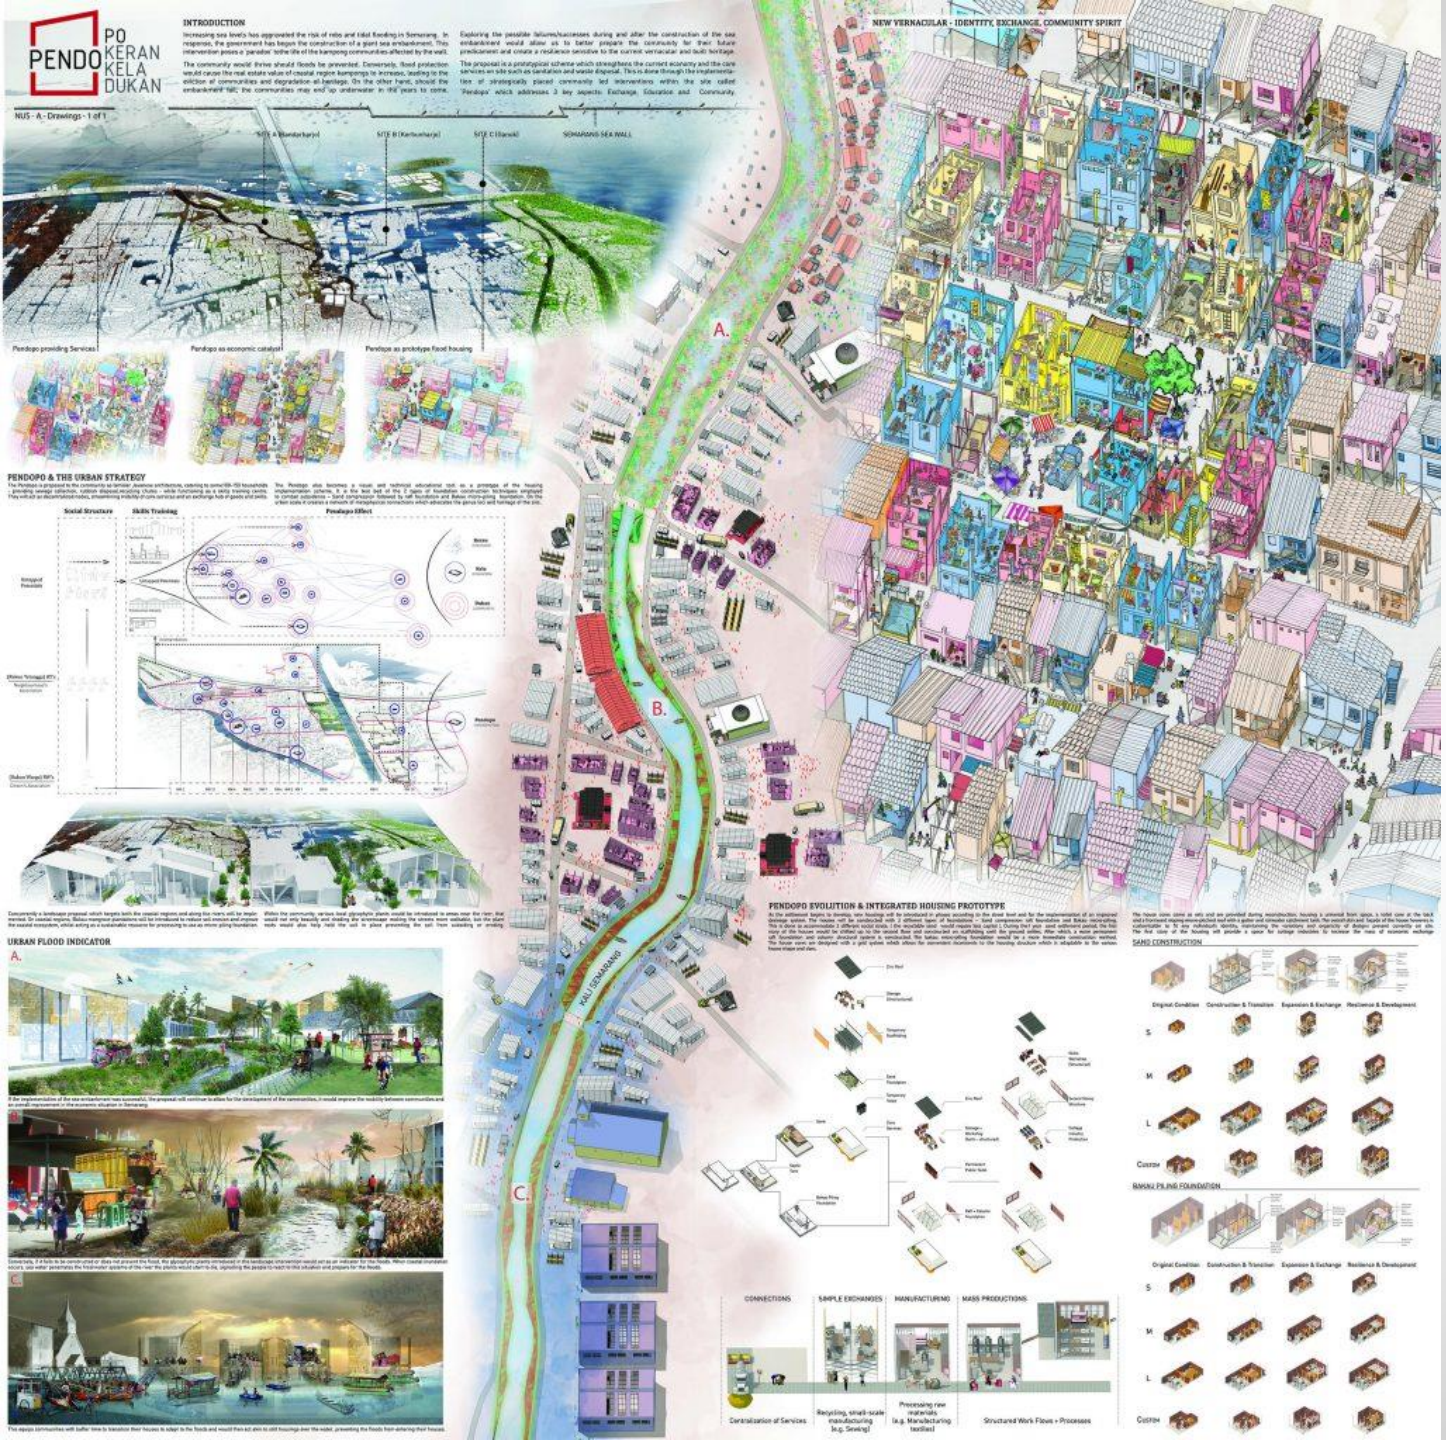

Kampung Kali Bahru, Bandarharjo, Semarang

RETRACE – WATER, CULTURE AND IDENTITY

PENDO – PO, KERAN, KELA, DUKAIN

The Pendopo is a community space which addresses 3 main aspects: Exchange, Education and the Community. It creates a metaphysical connection across the whole site which advocates the genus loci and heritage of the site. It acts as the model for how the prototype housing can be constructed.

The Free Flow concept translated into architecture and planning as an integrated water sensitive development. Each components of the site, i.e. housing, heritage, industrial warehouses, etc. are developed based on the water sensitive development approach. Further to that, the components are also planned and designed to be an integrated system in a way that it is not only developed the physical elements but also to develop the social and economic system.

Before
After

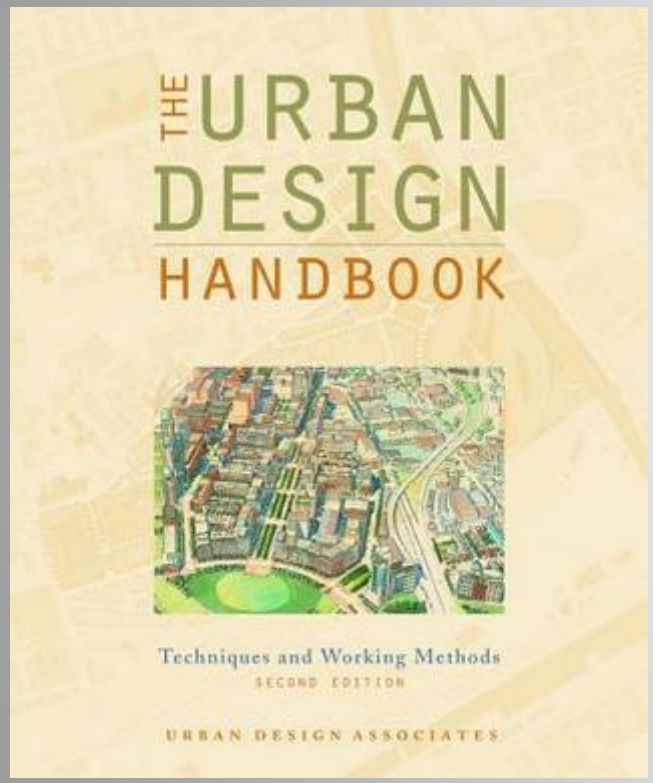

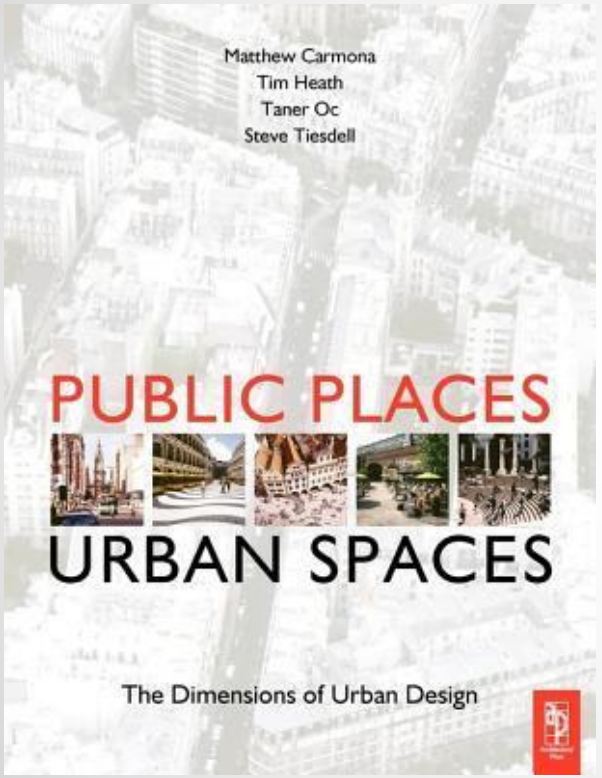

CAFE

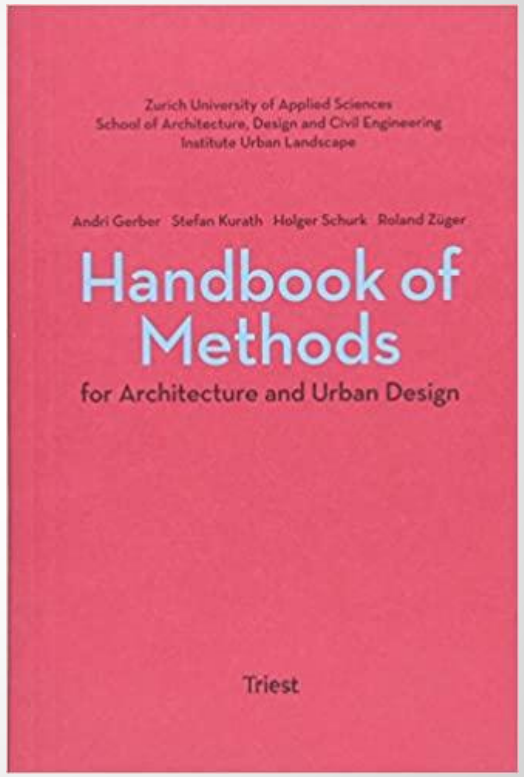

SIMPULAN:

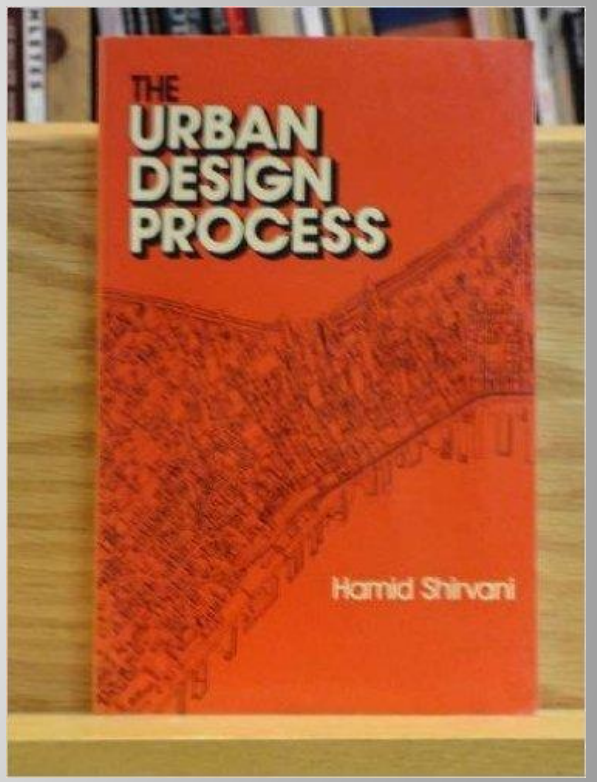

- Apa yang bisa disimpulkan????
- Metode dalam Perancangan Kota:….
- Pendekatan sinoptik dalam proses perancangan kota:…
- Contoh yang ada menunjukkan bahwa:….
- Apakah sudah terbayang, apa yang akan dilakukan di lokasi anda??
- Mulai direncanakan, buat design survey-nya.
